

Accounts Receivable, Aging by Patient

Description

Aging By Patient

This report lists accounts receivable for patient and insurance balance totals by patient. The totals are separated by aging category. The difference between this report and the Procedure Date Aging by Patient report is that this report takes all account activity (for example, balance forwards and transferred balances) into consideration when aging the balances. The Procedure Date Aging by Patient report ages based on the Date of Service/Date of Entry of the procedures only and does not restart based on other account activity.

This report enables a practice to review, at a summary level, balances and the ages of these balances for each patient in the database. This report provides a good overview for management or doctor review and could be used to quickly identify and prioritize patient balances for account follow-up. Responsible party name and phone number are listed on the report, so this report would be useful in contacting patients with outstanding balances.

Note: For the ending A/R total to match the Financial Summaries, this report must be generated through the current date or by date of service.
